Kindly amend the claims in accordance with the following listing of the claims.

## LISTING OF THE CLAIMS

Claim 1 (original): A multilayer film comprising an outer heat-sealable polyolefin layer, a core gas-barrier layer comprising at least one gas barrier resin selected from the group consisting of EVOH and polyamide, and an outer bonding layer comprising styrene-based polymer which makes up at least 35 weight percent of the film, based on total film weight, the styrene-based polymer comprising modified styrene-based polymer, with the modified styrene-based polymer being present in the outer bonding layer in a ratio, with respect to the weight of the gas-barrier resin, of at least 0.1:1.

Claim 2 (original): The multilayer film according to Claim 1, wherein the styrene-based polymer makes up at least 38 weight percent of the film, based on total film weight, and the modified styrene-based polymer being present in the outer bonding layer in a ratio, with respect to the weight of the gas-barrier resin, of at least 0.3:1.

Claim 3 (original): The multilayer film according to Claim 1, wherein the styrene-based polymer makes up at least 40 weight percent of the film, based on total film weight, and the modified styrene-based polymer being present in the outer bonding layer in a ratio, with respect to the weight of the gas-barrier resin, of at least 0.5:1.

Claim 4 (original): The multilayer film according to Claim 1, wherein the modified styrene-based polymer comprises anhydride grafted styrene-based polymer.

Claim 5 (currently amended): The multilayer film according to Claim 4, wherein the modified styrene-based polymer are maleic anhydride modified styrene block copolymers. 4. A substrate/film composite comprising a substrate comprising styrene-based polymers and a gasbarrier multilayer film of claim 1.

Claim 6 (currently amended): A substrate/film composite comprising a foam substrate and a multilayer film comprising an outer heat-sealable polyolefin layer, a core gas-barrier layer comprising at least one gas barrier resin selected from the group consisting of EVOH and polyamide, and an outer bonding layer comprising styrene-based polymer which makes up at least 35 weight percent of the film, based on total film weight, the styrene-based polymer comprising modified styrene-based polymer, with the modified styrene-based polymer being present in the outer bonding layer in a ratio, with respect to the weight of the gas-barrier resin, of at least 0.1:1.

Claim 7 (original): The substrate/film composite according to Claim 6, wherein the <u>substrate</u> comprises foam. foam substrate comprises polystyrene.

Claim 8 (currently amended): The substrate/film composite according to Claim 6-7, wherein the foam substrate comprises substrate/film composite reclaim in an amount of from about 0.001 percent up to about 100 percent, based on foam substrate weight.

Claim 9 (original): The substrate/film composite according to Claim 7, wherein the foam substrate comprises substrate/film composite reclaim in an amount of from about 0.001 percent up to about 100 percent, based on foam substrate weight.

Claim 10 (original): The substrate/film composite according to Claim 8, wherein the foam substrate comprises substrate/film composite reclaim in an amount of at least 20 percent, based on weight of foam substrate.

Claim 11 (original): The substrate/film composite according to Claim 10, wherein the foam substrate comprises substrate/film composite reclaim in an amount of at least 30 percent, based on weight of foam substrate.

5

Claim 12 (original): The substrate/film composite according to Claim 11, wherein the foam substrate comprises substrate/film composite reclaim in an amount of at least 40 percent, based on weight of foam substrate.

Claim 13 (original): The substrate/film composite according to Claim 12, wherein the foam substrate comprises substrate/film composite reclaim in an amount of at least 50 percent, based on weight of foam substrate.

Claim 14 (original): The substrate/film composite according to Claim 13, wherein the foam substrate comprises substrate/film composite reclaim in an amount of at least 60 percent, based on weight of foam substrate.

Claim 15 (original): The substrate/film composite according to Claim 9, wherein the foam substrate comprises substrate/film composite reclaim in an amount of at least 20 percent, based on weight of foam substrate.

6

Claim 16 (original): A tray comprising a substrate/film composite comprising a foam substrate and a liner which comprising a multilayer film having an outer heat-sealable polyolefin layer, a core gas-barrier layer comprising at least one gas barrier resin selected from the group consisting of EVOH and polyamide, and an outer bonding layer comprising styrene-based polymer which makes up at least 35 weight percent of the film, based on total film weight, the styrene-based polymer comprising modified styrene-based polymer, with the modified styrene-based polymer being present in the outer bonding layer in a ratio, with respect to the weight of the gas-barrier resin, of at least 0.1:1.

Claim 17 (original): The tray according to Claim 16, further comprising a bottom portion and side walls integral with the bottom portion, and a flange extending outwardly from top edges of the side walls.

Claim 18 (original): The tray according to Claim 17, wherein the flange extends outwardly in a plane parallel to the bottom portion.

Claim 19 (original): A food package comprising:

(A) a tray comprising a substrate/film composite comprising a foam substrate and a liner comprising a multilayer film having an outer heat-sealable polyolefin layer, a core gas-

barrier layer comprising at least one gas barrier resin selected from the group consisting of EVOH and polyamide, and an outer bonding layer comprising styrene-based polymer which makes up at least 35 weight percent of the film, based on total film weight, the styrene-based polymer comprising modified styrene-based polymer, with the modified styrene-based polymer being present in the outer bonding layer in a ratio, with respect to the weight of the gas-barrier resin, of at least 0.1 : 1, the tray having a flange around a perimeter thereof;

- (B) a food product on an upper surface of the tray; and
- (C) a film over the food product, the film being sealed along the flange of the tray.

Claim 20 (new): The substrate/film composite according to Claim 6, wherein the substrate comprises polystyrene.

8
